NeoDose™ Solo

One Material. Pure Performance.

NeoDose™ Solo

NEOPAC
THE TUBE

Airless tube made from PE.

This mono-material tube brings simplicity and performance together in one powerful solution. Built with a single material PE pump and a Polyfoil® MMB tube, it is designed for full recyclability, making sustainable packaging effortless for brands and consumers alike.

Even with its streamlined material concept, it delivers maximum product protection. The advanced MDO-PE-EVOH barrier shields delicate formulas from oxygen and moisture, ensuring reliable protection and preserving quality over time. Thanks to the airless system, each pump stroke delivers precise, consistent dosing, enabling controlled use and minimising product waste.
