Essence of Elegance

Enhanced consumer experience - applicator tubes now designed for recycling

The Polyfoil® Sensation range redefines beauty and pharmaceutical packaging by offering superior protection and eco-conscious design. The monomaterial PP tube offers high barrier properties against light, air, and moisture, equivalent to all of Polyfoil® MMB PE tubes, ensuring the integrity and shelf life of sensitive formulations.

Elevating design, the tube is available with a metallic gloss effect and silkscreen printing, offering a visual experience that conveys luxury and brand value. Boost consumer engagement with a selection of full PP precision dosing applicators, ideal for the beauty, skincare, and skin health industries.

Designed to stand out, it guarantees a premium presentation on any shelf and ensures full recyclability in PP rigid streams*.

Take a step towards environmental responsibility with tubes that do not compromise on quality, appearance or experience.

*Full Product Approval Recyclclass C

Advantages

- First mono material tubes including applicators on the market
- Meeting European recycling standards and regulations
- Visually appealing, with a unique, elegant metallic effect, 360° decoration
- Food and pharma grade material
